

Customize your Terminal

Part 1 .bashrc

This tutorial will show you how to customize your terminal using .bashrc

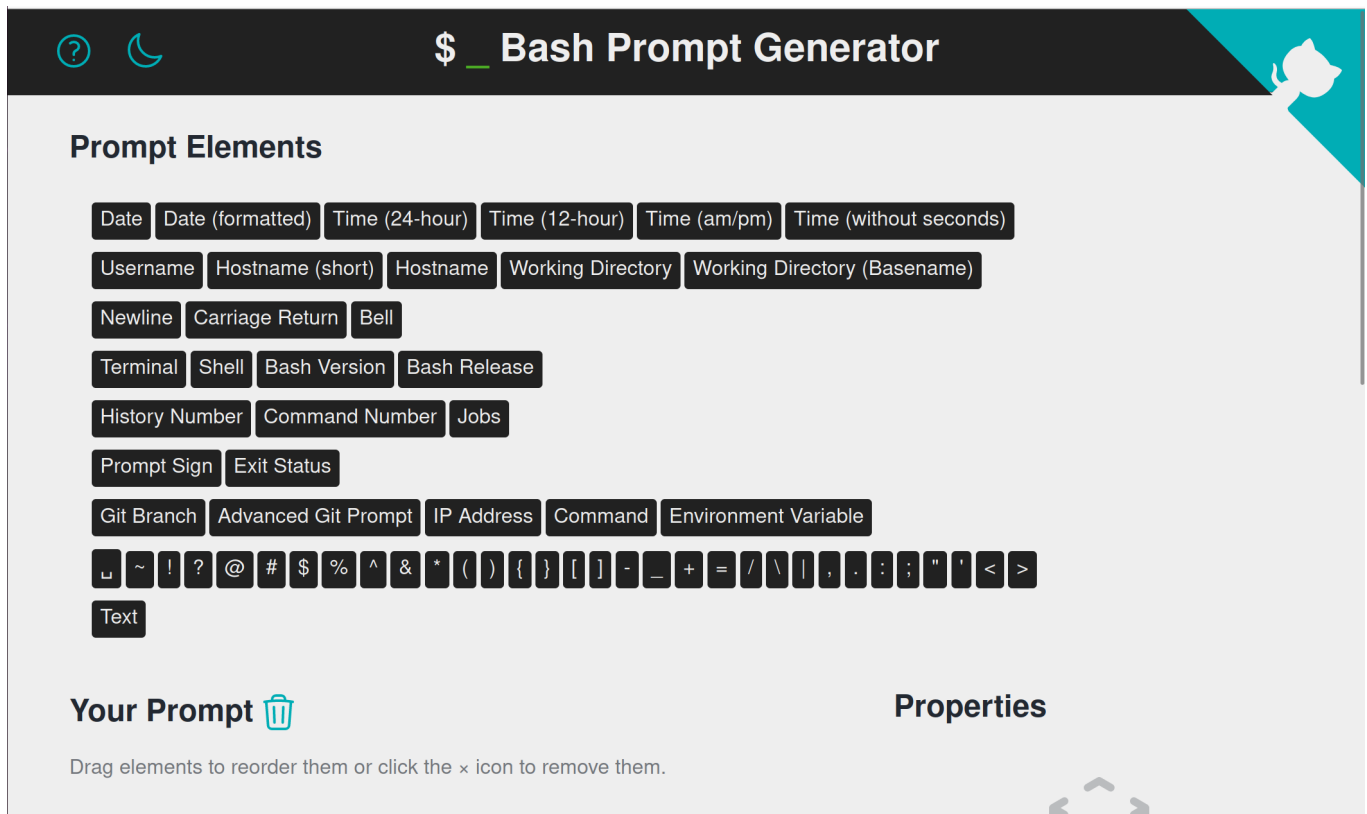

.bashrc - a configuration file for the Bash shell

Step 1: Go to <https://bash-prompt-generator.org/>

This website is a website made to customize your terminal easy!

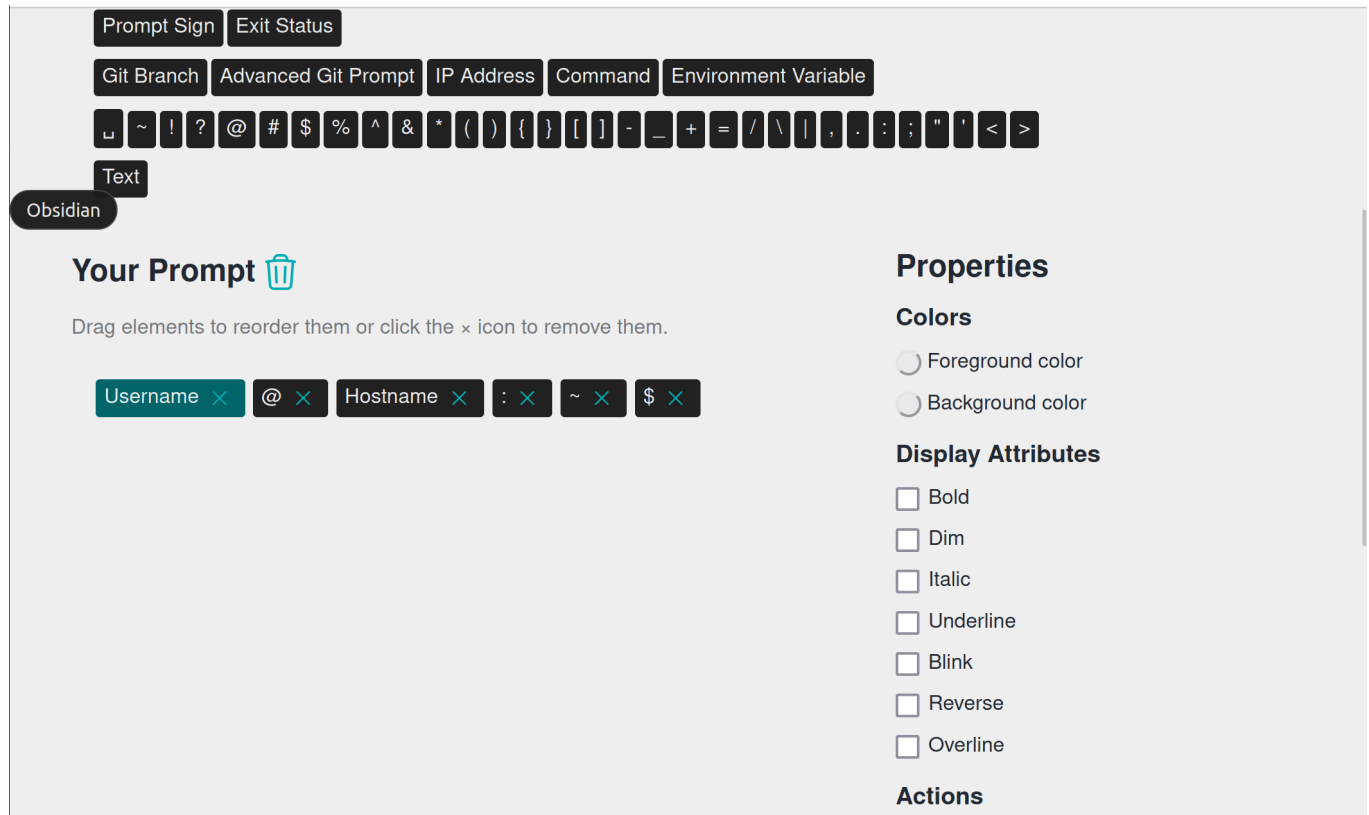

Step 2: Design the Prompt Elements

On this website, click the elements you would like in the order you would like it. Feel free to make it as crazy as you would like! The picture below shows your options and what the website will look like

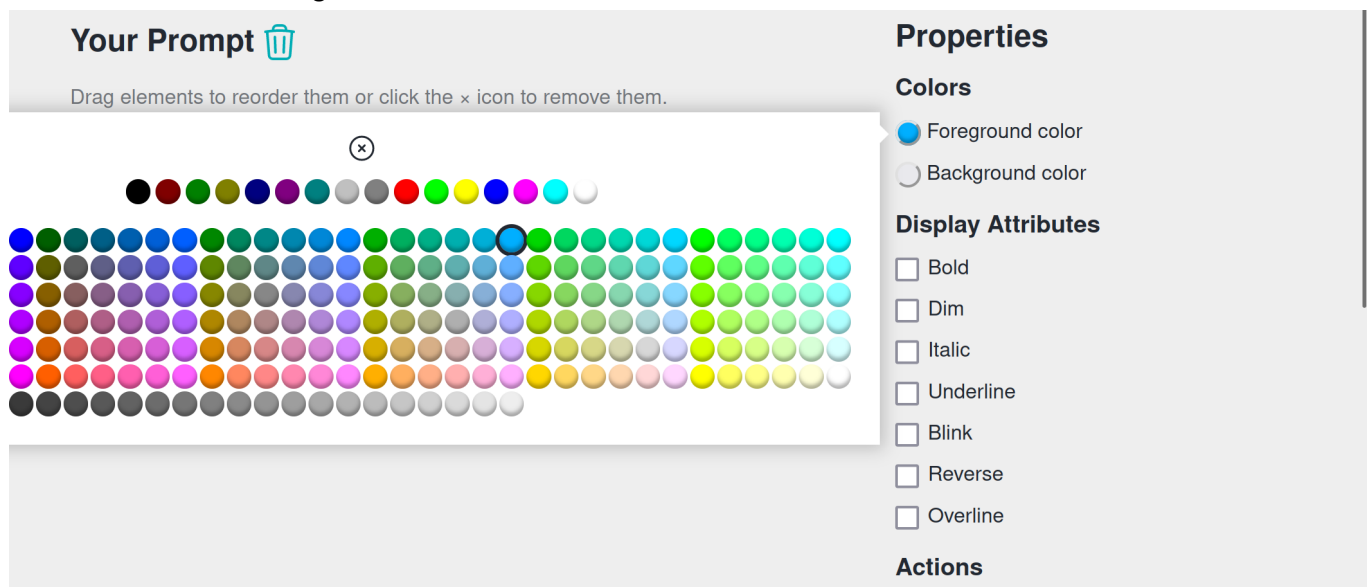

The screenshot shows the 'Bash Prompt Generator' website. At the top, there's a dark header with a question mark icon, a moon icon, and the title '\$ _ Bash Prompt Generator' next to a GitHub logo. Below the header, the main area is titled 'Prompt Elements'. It contains a grid of buttons for selecting prompt components: Date, Date (formatted), Time (24-hour), Time (12-hour), Time (am/pm), Time (without seconds), Username, Hostname (short), Hostname, Working Directory, Working Directory (Basename), Newline, Carriage Return, Bell, Terminal, Shell, Bash Version, Bash Release, History Number, Command Number, Jobs, Prompt Sign, Exit Status, Git Branch, Advanced Git Prompt, IP Address, Command, Environment Variable, a row of special characters and symbols, and a 'Text' button. At the bottom left, there's a section 'Your Prompt' with a trash icon and a note: 'Drag elements to reorder them or click the x icon to remove them.' At the bottom right, there's a 'Properties' section. The interface is clean and modern, with a light gray background and dark text.

This shows what it will look like once you get your order correct.

Step 3 Colors and more!

Now lets make it colorful and lots of fun! When you click on a element (can see in the picture above) you can see the properties menu. At this point you can fully customize your shell! It should look something like this

You can also see your preview below

Example Preview

```
username@hostname.com:~$
```

Step 4 The Upload

Now it is time to put it into your shell, copy the output. It is above your preview 

Output

Paste this line into your shell to test your prompt or append it to your ~/.bashrc file to set it permanently.

```
PS1='\[\e[38;5;39m\]\u\[\e[38;5;41m\]@\[\e[38;5;190m\]\H\[\e[38;5;49m\]:\[\e[38;5;50m\]~\[\e[38;5;230m\]\\$\[\e[0m\]'
```

Example Preview

```
username@hostname.com:~$
```

In your terminal paste it!

```
ptc6CtF{s4n1ty_v3r1ty_13d_28e8376d}
rachelarnold@framework-226-10:~$ cmatrix
rachelarnold@framework-226-10:~$ ^[[200~PS1='\[\e[38;5;39m\]\u\[\e[38;5;41m\]@\[\e[38;5;190m\]\H\[\e[38;5;49m\]:\[\e[38;5;50m\]~\[\e[38;5;230m\]\\$\[\e[0m\] '~
PS1='\[\e[38;5;39m\]\u\[\e[38;5;41m\]@\[\e[38;5;190m\]\H\[\e[38;5;49m\]:\[\e[38;5;50m\]~\[\e[38;5;230m\]\\$\[\e[0m\]~: command not found
rachelarnold@framework-226-10:~$ PS1='\[\e[38;5;39m\]\u\[\e[38;5;41m\]@\[\e[38;5;190m\]\H\[\e[38;5;49m\]:\[\e[38;5;50m\]~\[\e[38;5;230m\]\\$\[\e[0m\] '~
rachelarnold@framework-226-10:~$
```

Now you should see your theme on the terminal! Although it looks like it is there you aren't done yet! Now we need to save it. Type in the terminal

```
rachelarnold@framework-226-10:~$ nano ~/.bashrc
```

You are now in nano for your theme. Find the comment that says # If this is an xterm set the title to user@host:dir From there replace the command below it with the command you got from the website.

What it will look like before you replace it

```
# If this is an xterm set the title to user@host:dir
case "$TERM" in
xterm*|rxvt*)
    PS1="\[\e]0;${debian_chroot:+($debian_chroot)}\u@\h: \w\a\]$PS1"
    ;;
*)
```

What it should look like after you replace it

```
# If this is an xterm set the title to user@host:dir
case "$TERM" in
xterm*|rxvt*)
    PS1='\[\e[38;5;39m\]\u\[\e[38;5;41m\]@\[\e[38;5;190m\]\H\[\e[38;5;49m\]:>
    ;;
```

You are finally finished and have replaced your terminal theme! You can test it by reloading the terminal!
